Objective

Motivated B.E. graduate in Artificial Intelligence and Machine Learning with strong knowledge in Data Science, Machine Learning, and AI application development. Seeking an entry-level opportunity to apply technical skills, solve real-world problems, and contribute to innovative and scalable technology solutions.

Internships & Training

Data Scientist Intern – AIML LABS PVT LTD (6-)

- Completed hands-on training in Data Science and Machine Learning focused on real-world problem solving and model development.
- Worked on data preprocessing, Exploratory Data Analysis (EDA), feature engineering, and model evaluation techniques.
- Built and evaluated machine learning models using classification and regression algorithms.
- Developed and deployed AI/ML applications using Streamlit and Render.

Skills

Programming: Python (Pandas, NumPy, Matplotlib, Seaborn) ,SQL

Machine Learning: Supervised Learning (**Scikit-learn**), Classification & Regression Algorithms

Deployment & Tools: Streamlit, Render, Azure

Data Visualization: Power BI, Tableau

Statistics & Analytics: EDA , Model Evaluation & Feature Engineering

Education

BE/BTECH (Artificial Intelligence & Machine Learning)	2021 -2025	SEA College of Engineering, Bengaluru	CGPA – 7.01
PUC (Class XII)	2021	Shree Vijetha PU College, Chintamani	71.5%
SSLC (Class X)	2019	Nalanda Vidhya Mandira ,Chintamani	68.18%

Projects

➤ Heart Disease Prediction (Machine Learning) -LINK

ML Project

Description

Developed a machine learning model to predict heart disease risk using patient clinical data and deployed it as a real-time Streamlit web application.

Key Contributions

- Preprocessed and cleaned clinical data using encoding and feature scaling techniques.
- Performed Exploratory Data Analysis (EDA) to identify important health indicators.
- Built and compared multiple machine learning models including Logistic Regression, KNN, SVM, and Decision Tree.
- Evaluated models using Accuracy, Precision, Recall, and F1 Score metrics.
- Selected KNN as the best-performing model for prediction.
- Developed and deployed a real-time prediction application using Streamlit and Render.

Technologies Used: Python, Scikit-learn, Pandas, NumPy, Streamlit

Project Type: Machine Learning, Healthcare Prediction, Streamlit Web Application

➤ ResearchMind: AI-Powered Research System -[Link](#)

AI Research Tool

Description

Developed an AI-powered research application that generates structured research reports from user topics using web search, content extraction, and summarization through an interactive Streamlit interface.

Key Contributions

- Built an automated research pipeline for topic-based report generation.
- Integrated Tavily API for relevant web search results.
- Implemented web scraping using Requests and BeautifulSoup.
- Generated structured reports with key findings, summaries, and sources.
- Developed a real-time Streamlit web application with downloadable Markdown reports.
- Cleaned and processed scraped webpage content for accurate report generation.

Technologies Used : Python, Streamlit, Tavily API, BeautifulSoup, Requests

Project Type: AI Research Automation, Web Scraping, Streamlit Web Application

➤ Customer Churn Prediction in Retail

ML Project

Description: Designed a customer churn prediction model for a retail loyalty program using historical purchase data, model identified high-risk churn customers, enabling targeted retention strategies and reducing churn by 15%.

Roles and Responsibilities:

- Collected and processed transactional and customer engagement data for feature extraction and modeling.
- Designed and implemented models using Random Forest to predict churn.
- Deployed the model using Azure ML to ensure scalability and real-time predictions.
- Developed a dashboard for customer retention teams to visualize churn risk and customer segmentation.
- Conducted statistical analysis and A/B testing to measure the effectiveness of retention campaigns.
